# COMMISSION OF THE EUROPEAN COMMUNITIES

Brussels, 03.09.2004 SEC(2004) 1120

#### COMMISSION STAFF WORKING DOCUMENT

Analysis of the common market organisation in fruit and vegetables

EN EN

#### 1. FOREWORD

In August 2004 the European Commission presented to the Council and the European Parliament its report on the simplification of the common market organisation (CMO) in fruit and vegetables (COM(2004) 549 final). This report aimed preliminary to describe how the Commission simplified the CMO in the years 2002 to 2004, acting on certain areas of shortcomings on the basis of the Council requests; it was also intended to stimulate a debate in the institutions and within the sector by the means of a series of strategic open questions on the future developments of the CMO. This report was conceived as being accompanied by a working document of the Commission services presenting:

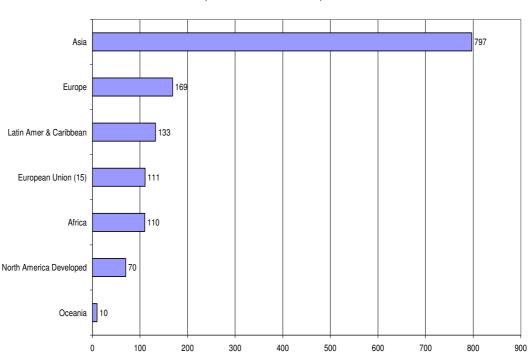

- an analysis of the principal figures of the sector;
- an analysis of budgetary issues in the recent years;
- an in-depth analysis of the implementation of one of the CMO's pillars, the producer organisations (POs) and the related Operational Funds.

The main aim of this working document is consequently to provide a solid background for the debate on the abovementioned strategic questions.

#### 2. MAJOR FACTS OF THE SECTOR

### 2.1. World supply and demand<sup>1</sup>

In 2001-2003, world production of fruit and vegetable products amounted annually to 1 290 million tonnes in average: fruit amounted to 480 million tonnes and vegetables to 810 million tonnes. Asia is by far the leading production region with a share of 62% and a sustained growth (in particular thanks to China), followed by Europe (14%), Latin America and Caribbean (11%), Africa (9%) and North America (6%). The share of the EU-15 is 10%.

World production of fruit and vegetables by main regions in million tonnes (average 2001-2003) (world: 1290 million tonnes)

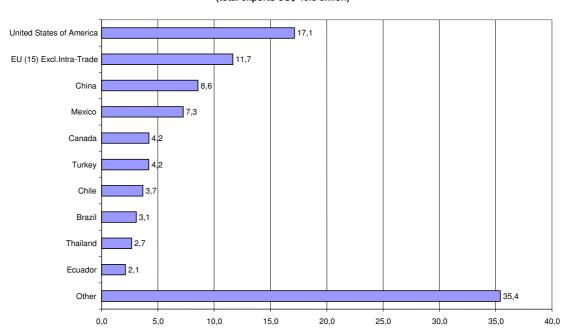

The largest producer in 2001-2003 is China with a share of 35% of world production (25% in 1995), followed by India (10%), the EU-15 (9%) and the USA (5%).

It must be emphasised that production of fruit and vegetables has increased by 36% in volume in the period 1995-2003. Two-thirds of this growth originates in China where production has increased by 96% (from 250 million tonnes in 1995 to 480 million tonnes in 2003). Growth in the other major producers has not reached such a high level: 6% in the EU-15, 38% in India and 3% in the USA.

\_

FAO data. All fruit and vegetables (excluding potatoes, including all kinds of grapes). The aggregates are therefore wider than products covered by the common market organisation for fruit and vegetables.

#### 2.2. World and EU trade

Top ten exporters of fruit and vegetable products (% of world trade, average 2000-2002) (total exports US\$ 46.8 billion)

World trade in fruit and vegetable products¹ revolves around €50 billion per year (taking the EU as one entity, intra-EU trade excluded). In value in the period 2000-2002, the USA were the leading exporter with a share of 17.1% of world exports. They were followed by the EU (11.7%), China (8.6%) and Mexico (7.3%). More than half imports are directed to three major markets: the EU is the largest one (25.0% of world imports), followed by the USA (19.8%) and Japan (11.1%).

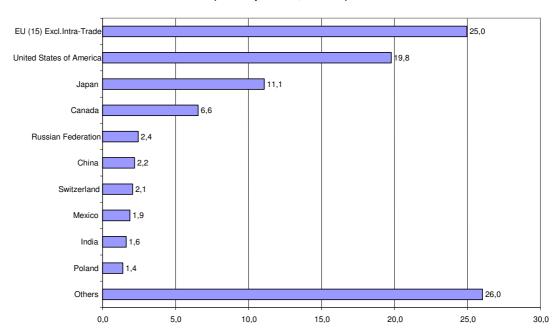

The EU registered the highest trade deficit with  $\in 8.6$  billion (annual average of 2001 and 2002), Japan comes second with a deficit of  $\in 6.2$  billion. Highest trade surpluses are achieved by China ( $\in 3.3$  billion), Mexico ( $\in 2.6$  billion) and Turkey ( $\in 2.1$  billion).

In the last few years, the EU-15 has exported annually more than 2.5 million tonnes of fresh fruit, of which approximately one-third were directed to the candidate countries, now EU Member States. Exports of fresh vegetables have steadily increased since the 1990s and, on average in 2001-2003, reached 1.4 million tonnes. Exports of processed vegetables are more important: they have developed dynamically since the late 1990s to reach 2.5 million tonnes in average for 2002-2003 (€1.7 billion).

A major part of trade of the EU in fruit and vegetables is intra-regional. Once the latter is taken into consideration, the weight of the EU in world trade is even higher than above-mentioned: the EU is the main destination as well as the main supply region with almost half of the world imports and more than 40% of world exports.

FAO data (the 'fruit and vegetables' aggregate includes processed products, potato products and all grapes, wine excluded; it is therefore much wider than products covered by the fruit and vegetables CMO).

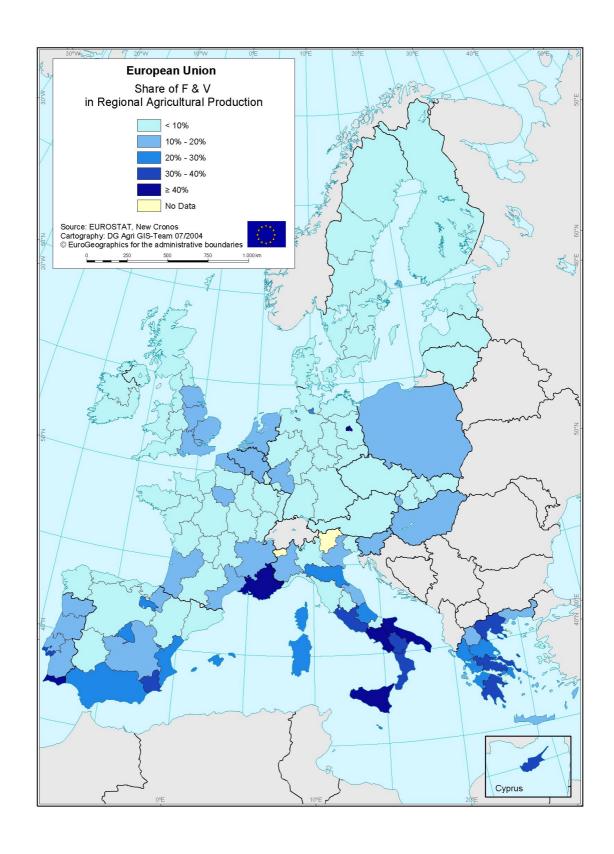

Top ten importers of fruit and vegetable products (% in value, average 2000-2002) (world imports: US\$ 53 billion)

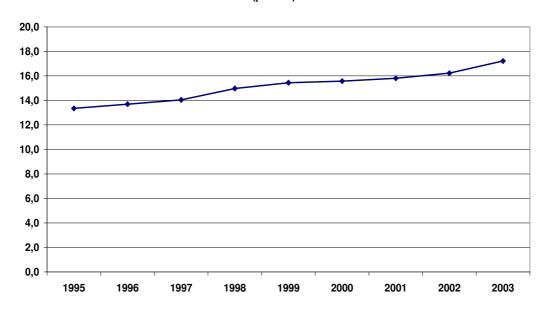

#### 2.3. Significance of the sector of fruit and vegetables in the EU

The economic weight of the sector of fruit and vegetable products represents an average of 16.4% of total agricultural production<sup>1</sup> of the EU-15 in the period 2001-2003 (for 2003, the share of the sector is 17.2% for the EU-15 and if we include the 10 new member countries 16.8%). The economic importance of the sector has increased steadily in the last few years (it has increased from 13.4% in 1995 to 17.2% in 2003), partly due to the decrease in market prices of the other products following the different CAP reforms. The significance of the sector is particularly high in Greece (34.5% in 2001-2003), Spain (32.3%), Portugal (30.8%), Italy (25.0%), Malta (24.1%). It is also important in Belgium (16.7%), Hungary (15.1%), Poland (13.9%), the Netherlands (13.1%), Slovenia (11.3%) and France (11.1%). The major producing regions of the EU are Andalucia (with a share of fruit and vegetable production in total agricultural production of 28.3%), Murcia (36.1%), Provence Alpes Côte d'Azur (42.0%), Emilia-Romagna (24.2%), Campania (42.4%), Puglia (42.4%) and Sicilia (47.8%).

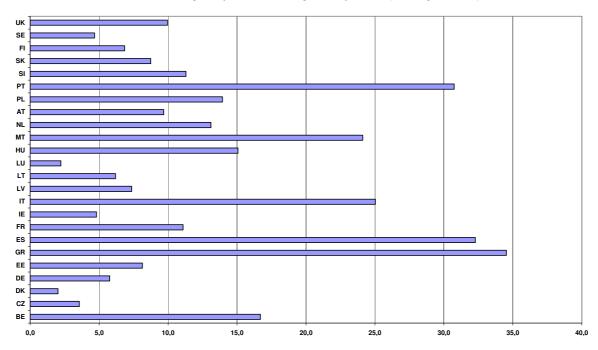

Production of agricultural goods (does not include services). The concept of final agricultural production (FAP) is no longer used in the economic accounts of agriculture.

Share of the fruit and vegetable sector in total agricultural production in the EU-15 (percent)

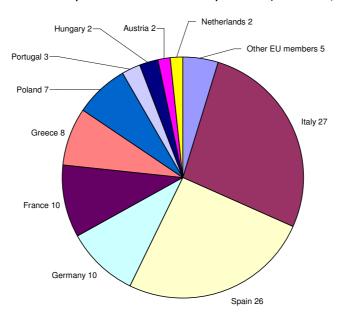

Share of fruit and vegetable production in total agricultural production (%, average 2001-2003)

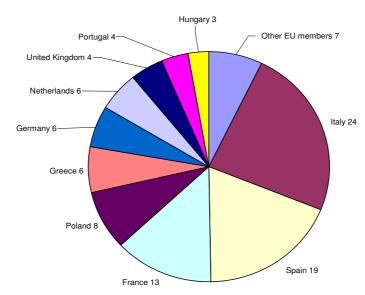

#### 2.4. Supply and demand in the EU

Fruit: share of the top ten countries in total EU-25 production (% in volume, 2000-2002)

In 2000-2002, in the EU-15 annual production of vegetables amounted 55 million tonnes, of which 15 million tonnes of tomatoes. Annual production of fruit was 35 million tonnes, of which 9.7 million tonnes of citrus fruit. Production levels have slightly increased since the mid-1990. With the enlargement to ten new Member States, production levels will increase to 64 million tonnes for vegetables and 40 million tonnes for fruit.

Vegetables: share of top ten countries in EU-25 production (% in volume, 2000-2002)

Intra-EU trade is an important factor in the development of fruit production. In 2000-2002, 35% of fruit production was exported within the EU market. The significance of intra-EU trade is much lower for vegetables, for which it stands at 14% of EU production.

Italy is the main producer of vegetables with 15.2 million tonnes, followed by Spain with 12.0 million tonnes. For fruit, Italy's production stands at 10.6 million tonnes while Spain's amounts to 10.2 million tonnes.

#### 2.5. Production structures

The sector occupies around 4% of the Utilised Agricultural Area (UAA) of the EU-25.

Results of the last two agricultural censuses allow drawing the main lines of evolution of specialised farm structures in the EU-15 between 1990 and 2000. The number of farms specialised in fruit and vegetable production has decreased from 990 400 in 1990 to 750 000 in 2000. The area cultivated by specialised holdings has decreased by 272 000 hectares for fruit between 1990 and 2000, but has increased by 50 000 hectares for vegetables.

The total number of holdings specialised in fruit production in the EU-15 has decreased from 691 700 in 1990 to 537 700 in 2000 while the average utilised agricultural area (UAA) per holding has increased from 3.4 to 3.9 hectares. The number of commercial specialised holdings<sup>1</sup> has been stable at around 65 000 in the period 1990-2000 with a slight increase of average UAA per holding from 16.5 to 17.0 hectares. The total number of holdings specialised in vegetable production has decreased from 298 730 in 1990 to 212 300 in 2000 while the average UAA per holding has increased from 3.8 to 5.5 hectares. The number of commercial holdings specialised in vegetable production has been relatively stable at around 67 000 with an increase of the average UAA per holding from 11.3 to 14.4 hectares

#### 2.6. Income situation

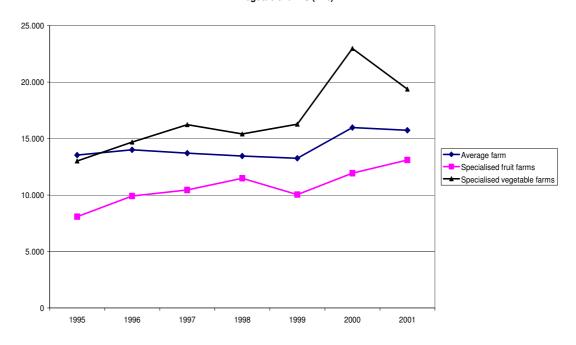

The average farm income per labour unit is substantially higher in specialised vegetable farms than in specialised fruit farms<sup>2</sup>. The analysis in the period 1995-2001 shows that, at the EU-15 level, the growth of income of specialised fruit farms and specialised vegetable farms has been higher than for the average farm. In the case of specialised vegetable farms, income has outpaced the average level. For specialised fruit farms while the income still stands below the average farm income, especially in southern European countries, the gap has narrowed.

\_

Holdings with an economic size above 16 European Size Units (ESU). The value of the ESU was €1 200 for the agricultural census of 2000.

In the EU farm classification: specialised fruit farms: farm class 32; specialised vegetable farms: farm class 143, 201 and 203.

Evolution of EU-15 average farm income (per labour unit) for specialised fruit and specialised vegetable farms (in €)

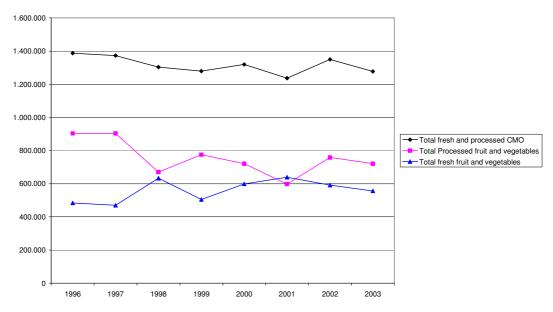

## 3. ANALYSIS OF THE MAJOR BUDGETARY TRENDS IN RECENT YEARS

#### 3.1. General trends

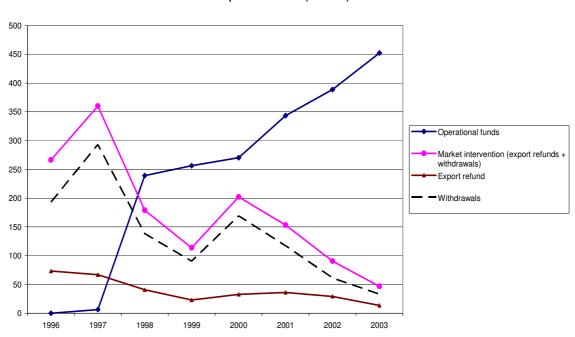

As exemplified by the following graph, since 1997 the global EU budget devoted to fruit and vegetables has declined. The same consideration can be done if we considered the CMOs for fresh and processed F & V separately.

Evolution of budget expenses in CMOs for fruit and vegetables (million  $\ensuremath{\mathfrak{e}}$ )

#### 3.2. Support to operational funds of producer organisations

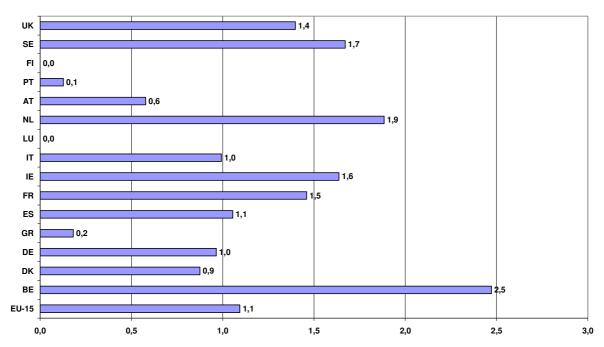

Since implementation of the CMO reform of 1996, the structure of budgetary expenses has changed dramatically in the CMO for fresh fruit and vegetables, as shown in the graph below.

Shift in budgetary expenses: intervention measures (export refunds and withdrawals) and operational funds (€ million)

EAGGF expenses to operational funds have steadily increased since the inception of the 1996 reform of the CMO. In 2003 expenses for operational funds reached €452 million.

In 2003, EAGGF payments for operational funds stood at 1.1% of total fruit and vegetable production in value at the EU level. For the MS where fruit and vegetable production is significant, EAGGF support varied between 0.1% in Portugal and 2.5% in Belgium.

Several reasons explain why support to operational funds stands well below the ceiling of 4.1% of the value of marketed production. Firstly, marketed production of fruit and vegetables by producer organisations stands at around 40% of total production at the EU level (for more details, see chapter 3 of this document). However, even if one considers only the production which is marketed through producer organisations, EAGGF expenses still reaches only 2.7% of that level. Secondly, support to operational funds includes features that play the role of "budgetary stabilisers". These features include the co-financing of operational funds by producer organisations and the nature of measures supported by operational programmes.

#### 4. PRODUCER ORGANISATIONS (POS) AND OPERATIONAL FUNDS (OFS)

#### 4.1. Introduction

The results presented in this working document section are the outcome of an in-depth analysis carried out by the Commission services on the basis of the yearly reporting routine enforced by article 26 of regulation (EC) n°1433/2003, according to which MS are due to send to the Commission an annual report on POs and use of OFs. The updating of the data on POs, Producer Groups (PGs) and Associations of POs (APOs), made on 2004 and referring to data on the 2000, 2001 and 2002 uptake, has been made in close association with the Member States (EU15). It should be specified that:

- All the data presented in this document result only from Member States (except data concerning OF expenditures for withdrawals).
- Cells on tables containing "nc" mean that no datum was communicated by the Member State.

#### 4.2. Producer organisations and fruit and vegetable production

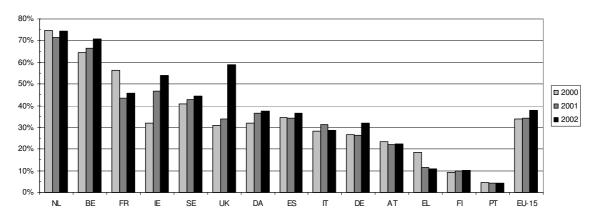

#### 4.2.1. Rate of organisation of the fruit and vegetables sector

The rate of organisation of the fruit and vegetables sector of EU-15 does not exceed 40% and progresses slightly between 2000 and 2002 to reach 38%. A great heterogeneity could be observed among Member States: NL and BE having the strongest rate of organisation (about 70%), while PT holds the lowest rate (5%). It should be noted that IE and UK strongly progressed in 2002 while EL decreased.

<sup>(1):</sup> Total production of F and V of France includes production of bananas.

#### Organisation rate of the F&V sector - EU15

#### 4.2.2. Number of POs and APOs

The number of active POs in the EU falls very slightly between 2000 and 2002, compared to data presented in the 2001 report, and turns roughly around 1 350.

APOs are very few (approximately 15) and concentrate about 6% of the European POs, while representing about 12% of the value of marketed production (VMP) channeled through POs.

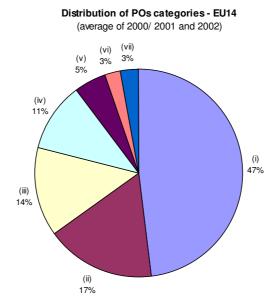

<sup>(2):</sup> One region (Calabria) is missing in the italian data.

As well as the rate of organisation, the number of POs greatly differs among MS: ES and FR have the great number of POs (550 for ES and 320 for FR), while AT, DK, FI and SE have the fewer (less than 10 POs). Details are presented in Annex I, table 1.

#### *4.2.3. The POs' distribution by category*

The differentiation in 7 categories of POs introduced by the '96 reform has not impelled a significant specialisation: the following graph shows that the more important category is by far category (i), i.e. the non-specialised category (see also Annex II, graph 1).

It has to be noted that only 50% of data on the POs recognition categories are available. More specifically, we have no piece of data for the Spanish POs.

### 4.2.4. Number of POs members

The following data should to be considered with precaution, due to the fact that MS do not seem having interpreted the different categories in a harmonised way.

The European POs concentrate approximately 460 000 members to whom a few hundred transnational members must be added.

<sup>(1) :</sup> Data given are supposed to contain physical  $\underline{\text{and}}$  legal members.

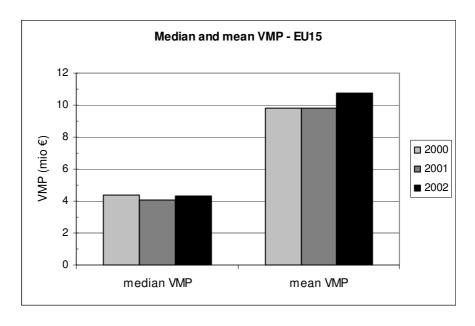

EN 15 EN

The three histograms presented on Annex II, graph 2 show that the majority of the European POs include less than 50 members. It has to be noted that it is not possible to establish any correlation or direct link between the number of members of a PO and its VMP.

#### 4.2.5. Value of Marketed Production through POs (VMP)

Between 2000 and 2002, the median VMP of the European POs is approximately equal to €4 million.

The median value has been considered as being more representative than the average one. The average VMP accounts for more than double of the median VMP, showing the existence of some POs in Europe presenting a huge economic dimension. This difference between the two values is particularly remarkable for NL. It should also be noted that DK, EL, ES, FI, IE and PT have a median VMP lower than the EU-15 median VMP.

The table and the graph below present the evolution of the POs VMP. Between 2000 and 2002, the POs for which the VMP increases (46% between 2000 and 2001 and 60% between 2001 and 2002) improve their economic result of about 30% every year while for the same period the total EU production of F&V progresses only by 3.5% a year.

Finally, the histograms presented in Annex II, graph 3 show that the majority of POs presents a substantial increase in their VMP from 2000 to 2002. They start in 2000 with a VMP ranging between €1 and 2 million to reach, in 2002, a VMP ranging between €4 and 5 million.

The previous data could lead to a first general conclusion: producers organised in POs experienced in the considered period a significant increase of their VMP, while the VMP of producers outside POs suffered from a substantial stagnation.

#### 4.2.6. Destination of production

The three graphs presented in Annex II, graph 4 should to be taken with precaution because the data on the destination of production presented in the MS reports do not seem completely reliable.

Nevertheless, these graphs show that the most important POs customers are the wholesalers, the central buying and the supermarkets (60 to 70% of the fresh products sales). Only 15 to 20% of the products channeled by POs appear to be delivered to processing.

#### 4.3. The use of Operational Funds (OFs)

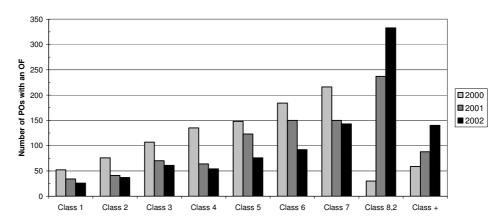

Between 2000, 2001 and 2002 the percentage of POs setting up OFs is stable around 73%. In AT, BE, DK, DE, IE, NL and SE, almost the totality of POs put in place OFs while POs from EL and FI are those using this opportunity at a lesser extent.

For EU-15, the OFs account for approximately 6% of the POs VMP. BE and IE are the only two MS where OFs represents more than 8.2% of VMP.

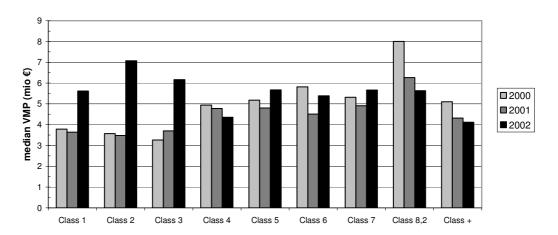

However, the following graph shows a strong progression of POs setting up an OF representing between 7 to 8.2% of their VMP.

Moreover, the graph below shows that no clear and direct correlation could be established between POs VMP and the size of their OF.

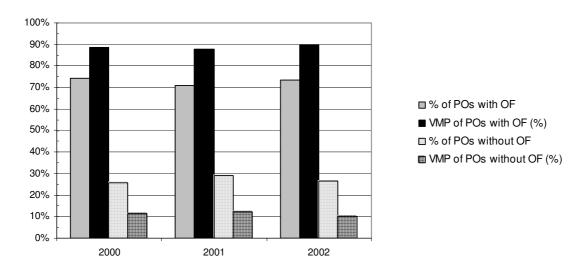

Value of the median POs' VMP according to the OF class - EU15

Legend: 0% of VMP < OF "class 1" ≤ 1% of VMP 1% of VMP < OF "class 2" ≤ 2% of VMP 2% of VMP < OF "class 3" ≤ 3% of VMP 3% of VMP < OF "class 4" ≤ 4% of VMP 4% of VMP < OF "class 5" ≤ 5% of VMP 5% of VMP < OF "class 5" ≤ 6% of VMP 6% of VMP < OF "class 7" ≤ 7% of VMP 7% of VMP < OF "class 8,2" ≤ 8,2% of VMP 8,2% of VMP < OF "class 8,2" ≤ 8,2% of VMP 8,2% of VMP < OF "class +"

And finally, when we compare POs with OF and POs without OF, we observe that POs which set up OF (about 73%) account for almost 90% of the organised production in value while the others represent only 10% of the POs VMP (see graph below).

#### Percentage of POs with/ without an OF and percentage of their VMP - EU15

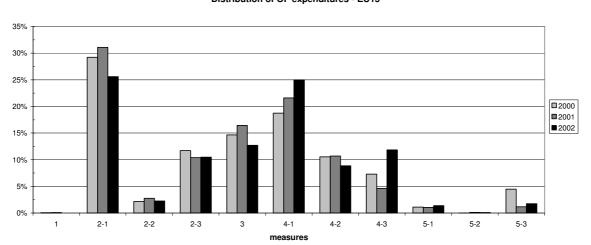

#### 4.3.1. Operational Funds and expenditure for withdrawals

The share of the total OF allocated to supplements of the Community Withdrawals Compensation (CWC) and/or to withdrawal compensations for products not listed in Annex II of the Regulation (EC) No 2200/96 accounts for less than 2%. And it has to be emphasised that this figure is constantly decreasing.

Only 4 MS (ES, FR, IT and the UK) use OF for the supplements of CWC and 7 MS (BE, DE, ES, FR, IT, NL and UK) make it use for withdrawal compensations for products not listed in Annex II (see Annex I, table 2).

#### 4.3.2. Operational funds and their utilisation

The following graph should to be taken with precaution due, in particular, to the fact that Spanish data are not exhaustive but extrapolated.

Distribution of OF expenditures - EU15

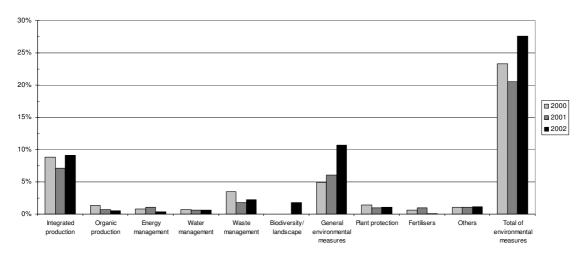

Leaend:

- 1 : Action Plan Specific measures for achieving recognition (valid until 2001)
- 2-1: Production Technical measures (phytosanitary measures, irrigation, machinery, greenhouses, plants, R&D)
- 2-2: Production Services, training, research (advice, warning (hail, frost, diseases), training courses, R&D)
- 2-3: Production Special environmental measures (organic / integrated production, R&D)
- 3 : Control Quality and phytosanitary measures (equipment, personnel costs, (incl. residue analysis), R&D) 4-1 : Marketing - Technical measures (land, real estate, storage, packaging, transport, R&D)
- 4-2 : Marketing Sales, promotion, outlets (production planning, market research, sales offices, promotion, R&D)
- 4-3 : Marketing Special environmental measures (waste management, additional transport costs, research, R&D) 5-1 : Other - Overheads (admin costs)
- 5-2 : Other Mergers and acquisitions 5-3 : Other Other (ISO 9000 systems, other)

It appears that measures set up most frequently are technical measures linked to production (2-1) followed by those linked to marketing (4-1). In Annex I, table 3, tables by MS can be found.

#### 4.3.3. Focus on environmental measures

#### Distribution of OF environmental expenditures - EU15

Environmental expenditures represent between 20 and 27% of total OF for EU-15. Integrated production is the most popular environmental measure, since it accounts for about 8% of the total OF expenditure. On the other hand, it appears that only 2% of the total expenditures is allocated to organic production, less than what it is observed for measures such as waste or water management. In Annex I, table 4, tables by MS can be found.

# **ANNEX 2: GRAPHS**

# Graph 1:

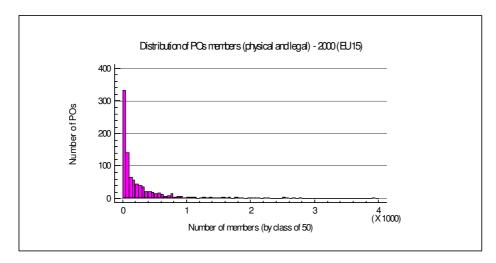

Data of Spain are missing for 2000, 2001 and 2002.

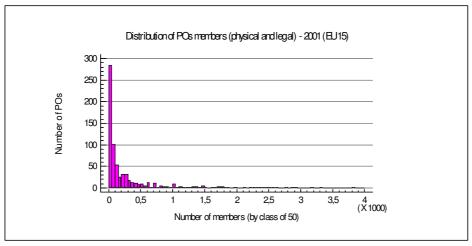

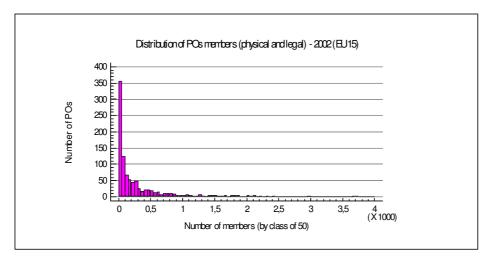

#### Graph 2:

The three following graphs present the distribution of POs' members by class of 50 members. For every year, approximately a quarter of POs stands between 5 and 50 members.

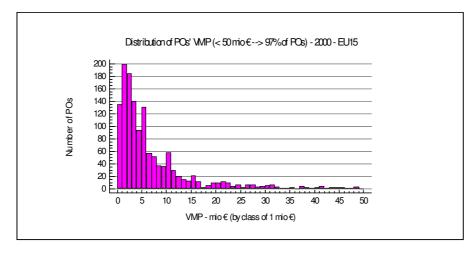

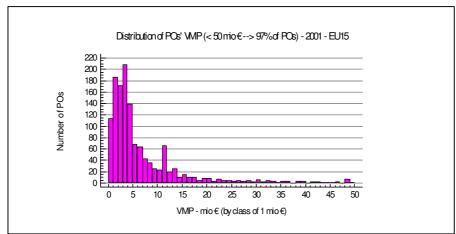

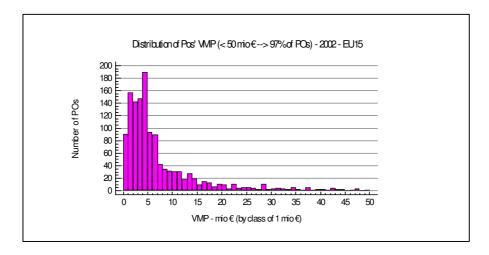

#### Graph 3:

The following three histograms present the distribution of POs VMP by class of €1 million.

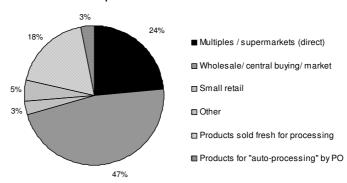

While the majority of Italian ( $\in$ 5 million < VMP of Italian POs majority <  $\in$ 10 million), Belgian ( $\in$ 5 million < VMP of Belgian POs majority <  $\in$ 10 million) and Dutch POs ( $\in$ 15 million < VMP of Dutch POs majority <  $\in$ 20 million) have VMP more important than the Community average, the VMP of the French and Spanish POs is mainly included between  $\in$ 0 and 5 million.

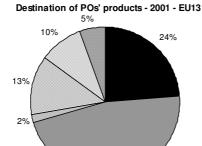

EN EN

# Graph 4:

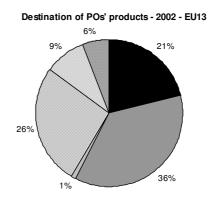

For 2000, data of AT, DK, ES, FR and PT are missing. And for 2001 and 2002, data of DK and ES are missing.
